**Fan Selection Basics**

**Verantis now offers free professional development courses for those looking to further their education in environmental control.**

---

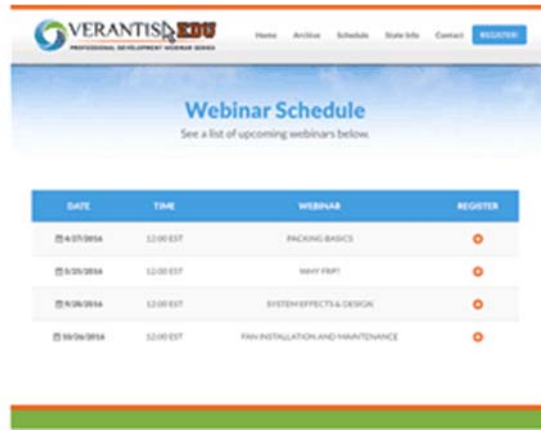

**Even for the most experienced engineers and supervisors, environmental control is complicated. Whether you're early in your career or a seasoned professional, there's always more to learn, and Verantis can be your go-to source for professional development coursework. We offer free webinars that cover topics involving current environmental control technology, regulations, products and services.**

Not only do our webinars offer useful information and answers to your environmental questions, but attending a Verantis webinar may also qualify you to receive Professional Engineer (PE) credits. A Verantis webinar is typically the equivalent of one PDH unit\*. Because each state has different requirements, Verantis has done the legwork to provide information for as many states as possible.

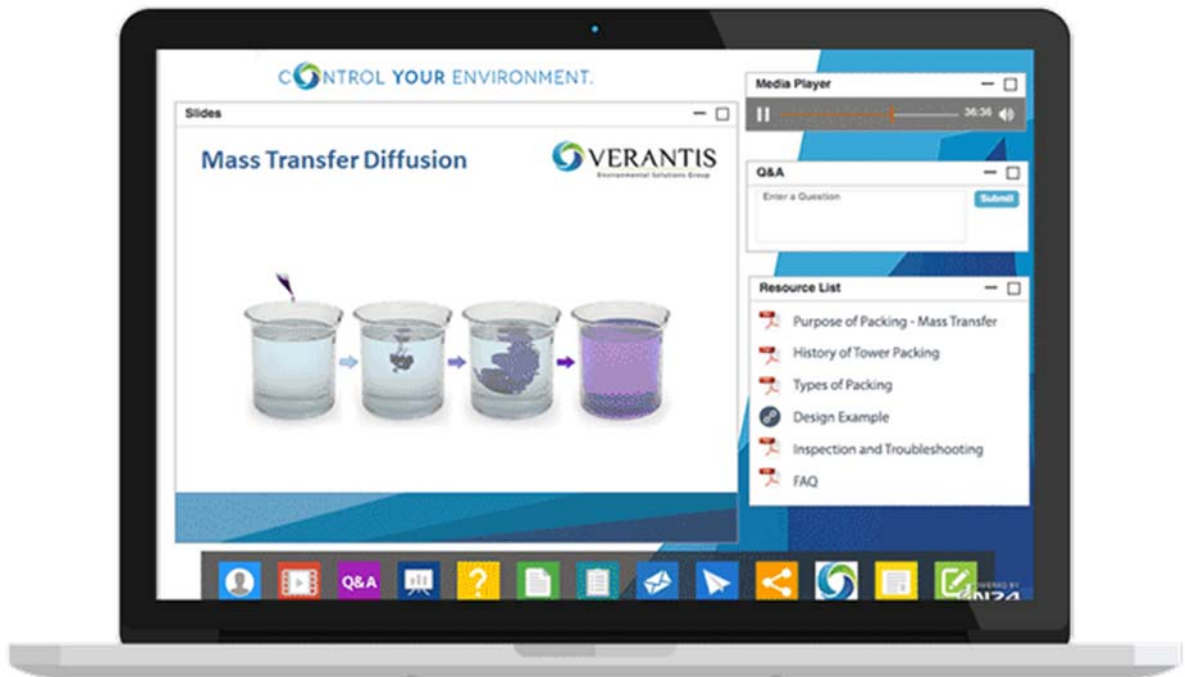

**After attending a webinar, Verantis will:**

- Administer a quiz and record results
- Provide a certificate of completion
- Maintain a log of all attendees for 6 years

Verantis webinars aren't just presentations... they're fully interactive experiences. Live presentations offer polls and quiz questions which attendees can respond to in real time.

Attendees can also take advantage of useful support document downloads during the presentation. In addition, each webinar features integrated Q&A functionality, allowing presenters to answer audience questions.

*\*You must attend or watch the entire webinar and complete the follow-up quiz to obtain PDH credits.*
